ROEQ TR500 Top Roller

The TR500 is developed to support heavy internal logistics in industrial facilities. The basic functionality of the TR500 is to perform automated load and unload operations. The design enables safe and reliable transportation of goods with varying footprint.

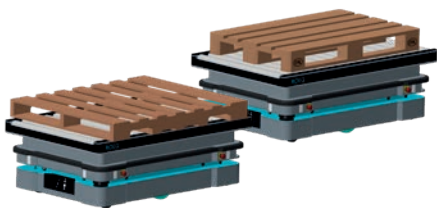

With TR500 the MiR500 is able to carry out scheduled pick-up and delivery tasks with many different types of heavy goods.

The standard TR500 is fixed in height 450 mm.

Optionally the TR500 can be delivered with fully automated lifter functionality for pick-up and delivery of goods in heights from 600 mm to 750 mm.

This is how the ROEQ TR500 works

TR500 carries various sizes of goods. Including US pallets.

The TR500 is optionally delivered with an automatic height adjustment solution, which gives the opportunity to collect and deliver in different heights.
